The Federal Transit Administration (FTA), has prepared this Tier 1 Draft Environmental Impact Statement (DEIS) for the Atlanta BeltLine in the City of Atlanta, Fulton County, Georgia, in cooperation with the Metropolitan Atlanta Rapid Transit Authority (MARTA). The Atlanta BeltLine is a proposed fixed guideway transit and multi-use trails system with a corridor of approximately 22 miles encircling central Atlanta. Tiering will allow the FTA and MARTA to focus on those decisions that are ready for this level of National Environmental Policy Act (NEPA) analysis to support future right-of-way (ROW) preservation. These decisions include selection of either Modern Streetcar or Light Rail Transit technology as the transit mode; selection of a general alignment of new transit and trails; and establishment of the ROW needs.

Ten Transit Build Alternatives are considered in this Tier 1 DEIS, formed of five alignments and two technology modes. For the most part, the proposed alignments of the Trail Build Alternatives, of which there are three alternatives, are adjacent to and in the same ROW as the Transit Build Alternatives. The No-Build Alternative is a baseline alternative that provides a basis of comparison with the Build Alternatives.

The Transit Build Alternatives share certain characteristics, such as the need for coordination with the freight railroads; however, other characteristics such as connections to key destinations or the amount of in-street running alignment set the transit alternatives apart from one another. Likewise, the Trail Build Alternatives share certain characteristics, such as consistency with the Atlanta BeltLine vision; however, other characteristics such as preserving the ability to keep transit and trails together set the trail alternatives apart from each other. The Tier 1 DEIS identifies strategies for avoiding or minimizing environmental impacts as the Atlanta BeltLine project design advances.
